CONTACT US

Green Whale Global uses patented technology to produce unique resins with a wide range of tensile strength & durability while remaining 100% compostable.

GREEN WHALE GLOBAL STORY

According to European Bioplastics, about 368 million tonnes of plastic is produced annually worldwide. Most plastic waste ends up in landfills or gets incinerated with only 9 % of it getting recycled. Conventional plastic waste takes hundreds of years to decompose in the ground and never decomposes in water. In the ocean, plastic breaks down into microplastics that is detrimental to marine life and poses a threat to humans when consumed. Green Whale Global aims to stop this vicious cycle by replacing conventional plastics with a biodegradable substitute.

Green Whale Global is a pioneer in producing a cost-effective biodegradable plastic resin stemming from over a decade of R&D. Green Whale's biodegradable plastic is made with bio-based ingredients to eliminate the release of toxic chemicals from the use or disposal of the products. Our patented unique blend of biodegradable feedstock and manufacturing process offers a wide range of characteristics, providing an eco-friendly and 100% compostable alternative to existing plastic products. With our convenient and sustainable solution, Green Whale Global leads the path to a greener future.

*"Only we humans make waste that
nature can't digest."*

– Charles Moore, oceanographer

MULTI-USE PRODUCTS

Green Whale Global produces cases, lids, caps,
hangers, and any other plastic products
but 100% biodegradable.

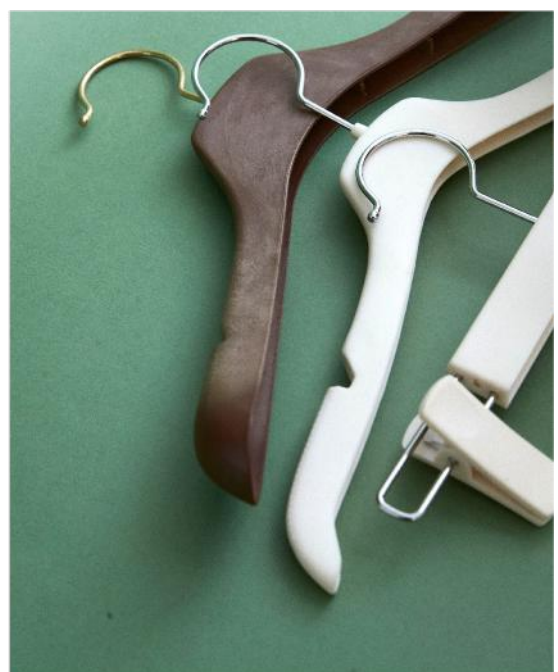

Cosmetic Case

Cap & Lid

Flower Pot

Customizable Hanger

SINGLE-USE PRODUCTS

Green Whale Global allows your customers to maintain the convenience and sanitation of single-use products, guilt-free.

Straw (Straight or Bent)

Cutlery

Plastic Bag

Take-out Tray

Plastic packaging for skin
care products

PACKAGING MATERIALS

Self-adhesive bag for
packaging clothes & products

Resealable
zip seal bags

INDUSTRIAL PRODUCTS

— Plastic parts that currently make up 50% of automobiles by volume

— Plastic parts for household appliances
